Topic document

Prepared using the supplied project instructions for “Import Data using Transform Maps”. The steps and expected behavior below are based on the supplied source document and templates. Actual execution results must be added after testing in ServiceNow.

Ideas considered

1. Manual record entry. 2. Import Set staging table. 3. Transform Map with field mapping. 4. Coalesce on Employee ID. 5. Validation in the target table. 6. Reports by department and location. 7. Employee list report and dashboard.

Prioritization criteria

Data accuracy, repeatability, duplicate prevention, ease of verification, and relevance to the documented ServiceNow workflow.

Highest priority

Use Import Sets and Transform Maps first because they form the core import workflow. Configure Coalesce next to handle repeated imports.

Supporting priorities

Validate target records after transformation, then create the three documented reports and consolidate them in Employee Analytics Dashboards.

Decision

Proceed with a staged import workflow and add validation, Coalesce, reports, and dashboard steps as extensions.
