Topic document

Prepared using the supplied project instructions for “Import Data using Transform Maps”. The steps and expected behavior below are based on the supplied source document and templates. Actual execution results must be added after testing in ServiceNow.

Target table setup

Create table label Employee Test and technical name u_employee_test. Add Employee ID, Employee Name, Email, Department, and Location as String fields, then save and confirm the form.

Import Set

Navigate to Load Data, create Employee Import, upload the spreadsheet, and confirm the import set is created.

Transform Map

Create Sample Spreadsheet Import; select Employee Import as source and Employee Test as target; use Auto Map Matching Fields and Mapping Assist; save.

Transform

Run Transform and check the completion message and target table records.

Coalesce

Open the Transform Map field maps and set Coalesce true on the selected matching field (Employee ID is the intended match for this plan); save and repeat an import.

Reports

Create Employees by Department (Pie / Count / Department), Employees by Location (Bar / Count / Location), and Employee List Report (List / five employee fields).

Dashboard

Create Employee Analytics Dashboards and add all three reports.

Evidence

Add screenshots and actual run results after completing the steps in ServiceNow. This document does not assert that the instance was executed.
