Topic document

Prepared using the supplied project instructions for “Import Data using Transform Maps”. The steps and expected behavior below are based on the supplied source document and templates. Actual execution results must be added after testing in ServiceNow.

Problem

Bulk employee spreadsheet imports can be slow to enter manually and may create inconsistent records or duplicates when data is loaded repeatedly.

Solution fit

Import Sets provide a staging area; Transform Maps define source-to-target mapping; Coalesce supports matching existing employee records; reports and a dashboard make the data easier to inspect.

Primary users

ServiceNow administrators, developers, testers, and teams responsible for employee data.

Benefits expected

Less manual entry, a repeatable import process, clearer validation, and improved visibility of employee distribution and import results.

Success measures

Target records match source values; repeated IDs update as configured; new IDs insert; repeated identical uploads are checked through transform history; saved reports display expected groupings.
