Topic document

Prepared using the supplied project instructions for “Import Data using Transform Maps”. The steps and expected behavior below are based on the supplied source document and templates. Actual execution results must be added after testing in ServiceNow.

Input layer

Excel spreadsheet containing employee records.

Staging layer

Employee Import / u_employee_import stores loaded source rows before transformation.

Transformation layer

Sample Spreadsheet Import Transform Map holds source-to-target field maps and Coalesce configuration.

Storage layer

Employee Test / u_employee_test stores the resulting employee records.

Validation layer

Import status, transform history, and target-table inspection are used to verify the outcome.

Presentation layer

Reports group records by Department and Location and provide a list view; Employee Analytics Dashboards presents the reports together.

Architecture note

The uploaded project document describes this ServiceNow-native flow; no separate external application or API is specified.
